

Editorial Opinion Pieces (DTU Times)

The Necessity of Unbiased Assessment in Engineering and Tech

Author: Yuvraj Singh | **Column:** DTU Times

Excerpt: "In engineering, a bridged gap in logic can lead to a collapsed structure. Yet, as we accelerate into the era of complex algorithms and generative technologies, we see a disturbing trend of 'hedging'—sugar-coating failures and relying on automated tools to evaluate automated outputs.

True analytical judgment requires human accountability. It requires an evaluator to look at a process—whether it is a weld line or a computational response—and declare it objectively flawed if the evidence dictates it. Critical assessment without bias or hedging is not just an academic exercise; it is the only way to build systems, physical or digital, that we can actually trust."

Relevance to AI Evaluation: This column demonstrates my foundational philosophy: I do not rely on AI tools to write my evaluations, and I do not hedge my feedback. I deliver precise, well-evidenced rationales.
